# Migration Guide

If you have already downloaded products on a storage solution (internal, external or NAS), you can easily migrate without the need to re-download all your products.
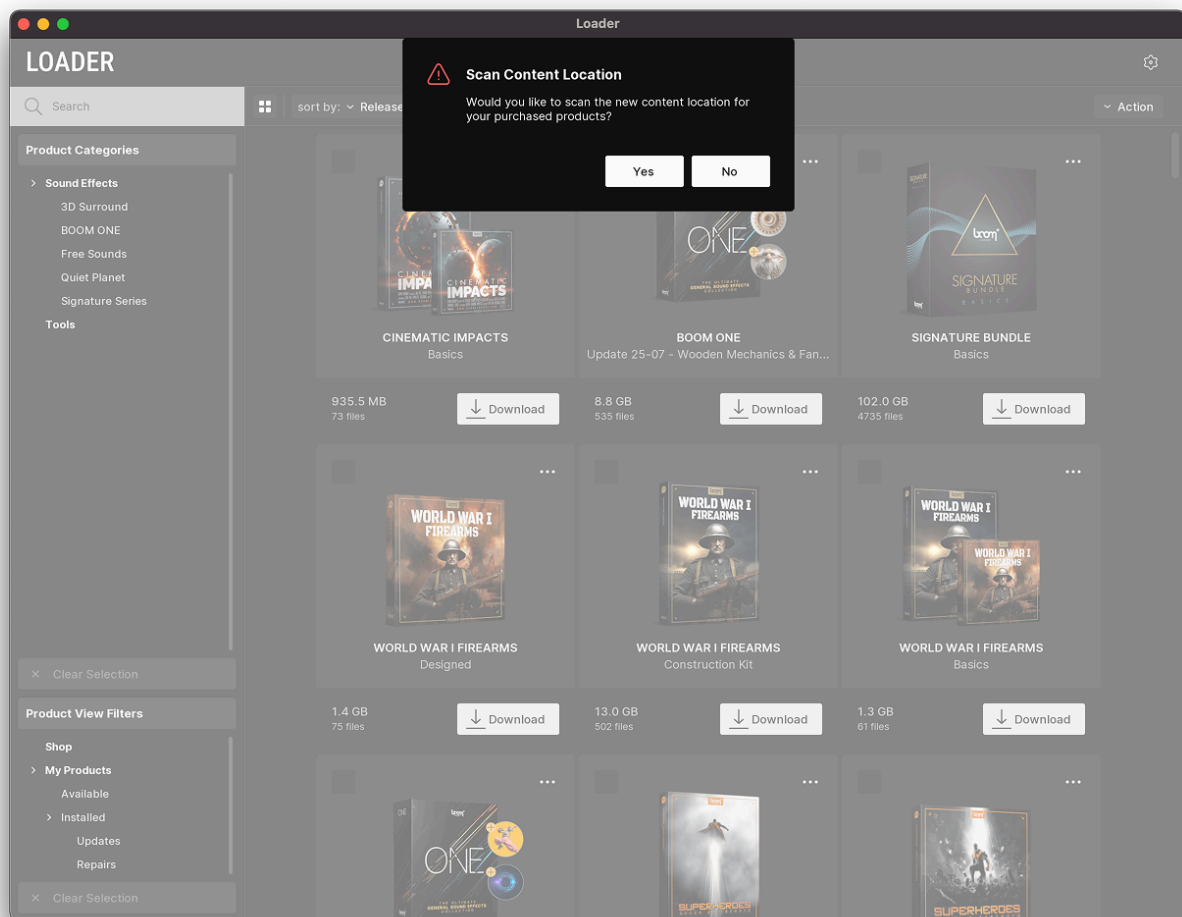

Start migration

Automatic

When you start the Loader for the first time, you will be asked whether you want to change the content location of your products.

You can then let the Loader scan the content location directly for your purchased products.
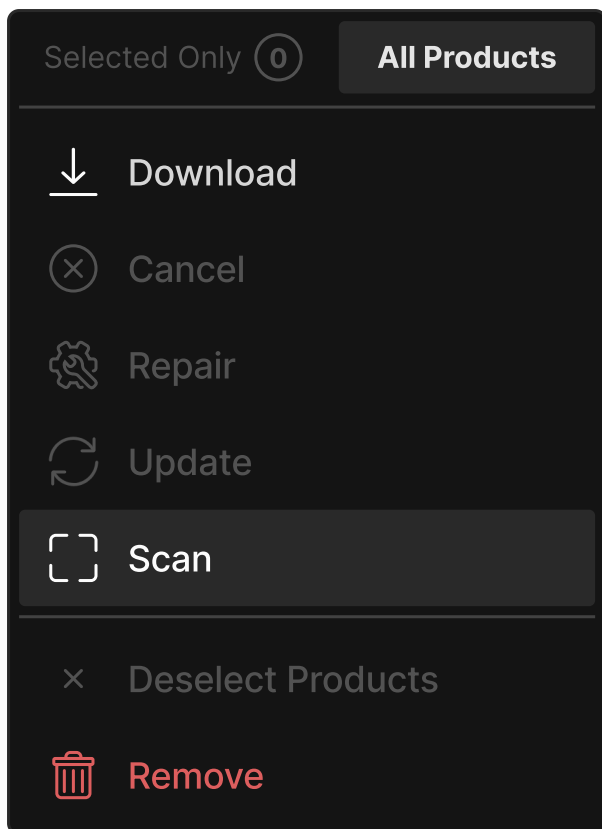

Manual

Click on `Action` .

Action

Select `All Products` at the top of the dropdown menu and then access `Scan` via the same menu.
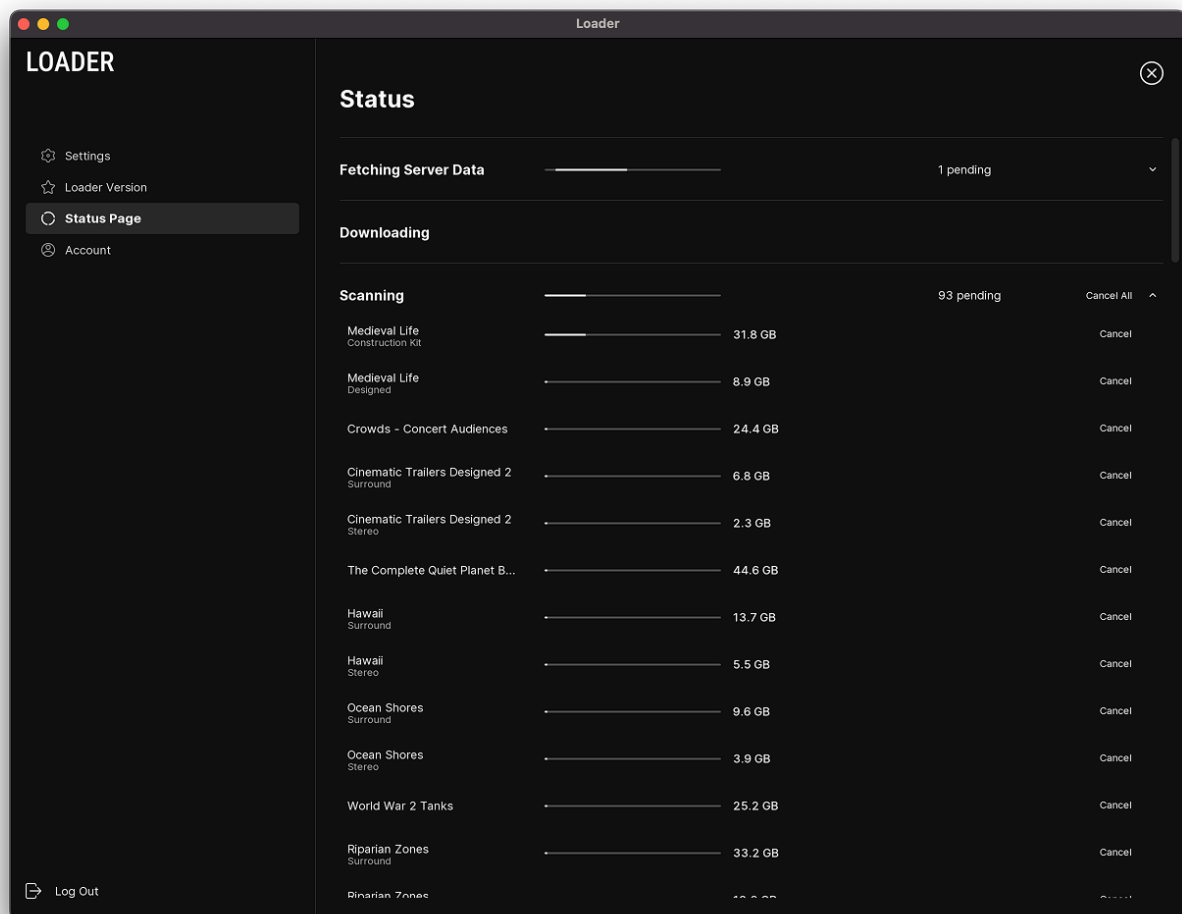

Please select the location of your products.

View migration process

You can view the migration process by clicking on the cogwheel icon in the upper right corner of the product page right next to your username and selecting `Status Page` .

Here you will see the number of pending products to scan.

Finished migration

Once the migration process is complete, you will be able to use all your products in the same way as before.

The scanned folder is not the folder future downloads will be stored at. You need to manually set this in the Settings.
